

Data Safeguard's Board of Directors Approve Project Optimus Prime

Santa Clara – On September 17th, 2021, Data Safeguard's Board of Directors have approved project Optimus Prime to expand the company's Cognitive Computing Engine's (CCE™) capabilities to protect sensitive and personal data, as well as recognize and prevent financial and medical fraud. This project was requested by Lee Nocon (CTO) and Praful Parekh (Director of Products) and unanimously approved by the Board.

"Today's decision by the DSG Board of Directors will pave the way for Data Safeguard to more completely address the evolving issues around data privacy, the unintended proliferation of PII, and transactional frauds" said Robbert Emery, COO at Data Safeguard. "This will help our customers ensure their customers' identities are robustly safeguarded and prevent significant financial losses."
